EIT & MEC - Digi Self-Guided Learning (SGL): Organization	Rev. 1.0	02.01.2026	Page 1 of 1

1. Objective:

Increase the self learning part of the students.

2. Motivation:

1. Self-learning allows students to get a better understanding.
2. Self-learning increases the ability to acquire knowledge independently.
3. The method improves the ability to structure knowledge.
4. The method facilitates teamwork.

3. Topics:

1. Switching circuits
2. Sequential circuits
3. Programmable logic devices
4. State machines

4. Procedure:

1. Topic submitted by the tutor.
2. Self-study based on the specified literature.
3. Team meeting (in teams of 3 - 5 students each):
 - Bring up own questions and try to clarify them.
 - Sum up the topic in a visual manner (optimum: one flipchart).
 - Formulate unanswered questions.
4. Final clarification meeting with the tutor in class:
 - Present the summary.
 - Ask the questions and hopefully get an answer.
5. Time frame (for items 1. to 4.): 1 – 2 weeks.

5. Constraints:

1. Each student should carry out the self-study because the topics are included in the assessment load.
2. Each student should participate in the meetings as active as possible.
3. Do not expect the tutor to explain you everything from scratch in the final clarification meeting.
You are expected to ask questions, which show that you have dealt with the subject.

6. Teams:

The teams will be defined at the beginning of the semester.
