

Fachhochschule Vorarlberg GmbH		Author: Horatiu O. Pilsan	
EIT & MEC - Digi SGL 3. Topic: Programmable Logic	Rev. 1.1	13.05.2026	Page 1 of 1

1. Objective:

Understand the mode of operation of programmable logic devices and get to know the different types.

2. Questions:

1. What is the structure (internal organization) of simple programmable logic devices (actual types are called GAL)?
2. What is the difference between a simple and a complex PLD (the latter is called CPLD)?
3. What is the structure (internal organization) of field-programmable gate-arrays (FPGA)?
4. What is the difference between CPLDs and FPGAs regarding structure (internal organization), technology and programming?

4. Tasks:

1. Sum up the most important pieces of information on the topic on one flip chart without adding too many details! Best suited is a visual manner.
2. Formulate questions on the topic, which you were not able to answer, neither alone nor in the team meeting!

5. Dates:

See course schedule in the information file for the course (_EIT-Digi_Info.pdf).

6. Literature:

- [1] Floyd, Thomas (2006): Digital Fundamentals, ninth edition, Pearson Prentice Hall, (chapter 11).
